SORMA PRESENTS THE NEW CATALOGUE OSAWA

Sorma, the Italian company leader in the design and distribution of cutting tools for the metalworking industry, presents the new Catalogue Osawa that is already available for consultation and download at <https://www.osawa.it/catalogue/>

*“ We are very pleased to bring to the market this new edition of the Osawa Catalogue, as a proof of our commitment to provide our customers with highly reliable and innovative drilling and milling solutions”, said Alessandro Sorgato, General manager, Solid Tools at Sorma. “With this edition we wanted to offer to our customers new tools enabling them to improve significantly cycle time and performances, such as the **UHF-RT end mills for high feed milling**, but we decided to improve also the consultation of the catalogue so the format of parameters for all tools has been revised and simplified.”*

The new catalogue features the **new 372HSD Step Drills**, designed for drilling and chamfering application before tapping on ISO P, ISO M, and ISO S materials and available in size from M4 to M12.

Among the long drill series, both **HL** and **SUH Mini** are available in this edition of the catalogue with shorter coating portion to improve chip ejection and with updated cutting parameters to allow even higher reliability in deep drilling process.

Printed copies will be available within a couple of weeks: go to <https://bit.ly/catOSW21> and complete the form to request yours. For any additional information on the new Osawa catalogue or technical information, contact our staff at info@sorma.net.

ABOUT THE COMPANY

Osawa is a trademark owned by Sorma S.p.a., which is on a mission to provide the cutting tool market with high performance solid tools for milling and drilling. Based on Sorma well-established know how, and Japanese and European best manufacturing technologies, the brand Osawa was launched in 2001.

To keep up with the evolution of production systems and costs, Sorma S.p.a. increased its investments and technology cooperation with its partners, always putting quality and reliability first.

Such structure makes Osawa able to meet a very wide spectrum of customers' requests, even on most critical applications. Its production flexibility together with the highly qualified direction of Sorma gives Osawa the possibility to offer customers with high performance solutions for any applications and materials.

Osawa selection includes:

– Solid carbide drills with and without inside coolant, HSS-HSS/Co general purpose drills as well high performance drills.

- A very wide choice of solid carbide end mills for high-speed application on hardened steel, for stainless steel and super alloys, for general purpose; HSS and HSS-P tools.
- High quality carbide rotary burrs, available in a wide variety of shapes and geometries.
